

JONES CONTINUES IT'S GREEN WAYS

Green practices are not just "feel good" measures to project Jones Sign as a good corporate citizen, they are ingrained in our core values. The health & safety of our employees is a dominant priority that extends beyond our building to the larger world around us. We seek out and embrace technologies and methods that make us a cleaner industry and provide our clients with energy efficient signage solutions.

- 1) We have switched to Arlon brand colored vinyls which have no lead in them, unlike their competitors.
- 2) We have switched from spray paint decoration of sign faces to cut vinyl.
No VOCs (Volatile Organic Compounds) are released into the air.
- 3) We have switched to powder coated pre-finished aluminum for all but custom color products, 80% less VOCs released into the air.
- 4) We recycle all excess acrylic, polycarbonate, aluminum, steel, cardboard, paper and solvents generated by the manufacturing process. 100% of these materials are recycled, none go into landfills.
- 5) Changed nearly 50% of signs from neon to LED for lighting and nearly 70% from fluorescent to HID (high intensity discharge) lamping, energy consumption of signs reduced an average of 60% over former methods.
- 6) All crane trucks equipped with diesel scrubbers per the 2005 standard for reduced emissions.
- 7) Billboard faces are recycled as tarps for general use – over 100,000 lbs less waste to landfills per year.
- 8) Our office building recycles whatever we can, paper, office supplies, aluminum, plastic, ... and is lit with energy saving technology.
- 9) Our fabrication building is heated with infra red heating which is very energy efficient.
- 10) We have been recycling all sign materials from removed signs since 1982.

JONES SIGN

Thank You for Being Our Customer!
